## **1. Abstract**

In the past we've run into various organizations that want to use open source software, but have challenges with its agile character. We've experienced that these organizations gladly delegate the interaction with the community, do not expect to have the latest new features at a monthly basis and most of all expect a stable well-

tested and documented product. Under the 'enterprise' label GeoCat is intentional to sell such an experience for OSGeo stack products to that group of customers.

In this presentation we're highlighting our experiences in the initial steps on this road. The benefit for the company and the benefits for the OSGeo stack products in general.

## 1. Author/s Biography

María is a software engineer with more than a decade of experience. Currently she is working for GeoCat focusing on developing GeoNetwork OpenSource project, where she is one of the main maintainers. María is member of several local Woman in Tech associations where she has been part of the board. She is also current board member of the Local Spanish-Speaking Chapter and the President of OSGeo.
